

## Fossil Field Trip (7/1/10)

We started out at Canandaigua CC with 12 participants. Found plenty of Brachs, horn coral, crinoid stems, a few trilobite sections, and a crinoid calyx to mention a few.

A number of mini-miners participated.

Crinoid calyx (center of photo one can see where stem was attached).

Gathering fossils at Canandaigua road cut.

Trilobite head found at Canandaigua.

Getting down and dirty at Bristol site.

Looking for the fossil that got away.

Some of the finds ( couple of gastropods, horn coral, rolled trilobite, & bryozoa).

Caught a few sitting down on the job.

Adventures in Rockhounding or is he that afraid of a little water.
